## İÇİNDEKİLER / INDEX

### HİDROLİK POMPALAR / HYDRAULIC PUMPS

<b>H</b>	Hakkımızda / About Us	: II-III
	Pompa Kod Açılımı / Pump Code Description	: V
	Uygun pompa seçimi / Selecting The Right Pump	: VI- VII
	Pompa Yön Değiştirme / Reversing Pump Rotation	: VIII - IX
	30 Serisi Dişli Pompalar / 30 Series Gear Pumps	: 01 - 18
	40 Serisi Dişli Pompalar / 40 Series Gear Pumps	: 19 - 30
	Şaftlı Dişli Pompalar / Shaft Mounting Gear Pumps	: 31 - 38
	K Serisi Dişli Pompalar / K Series Gear Pumps	: 39 - 40
	Eksenel Pistonlu Pompalar / Bent Axis Piston Pumps	: 41 - 50
	Pistonlu Pompalar / Piston Pumps	: 51 - 60

### P.T.O/ POWER TAKE OFF

<b>P</b>	P.T.O Kod Açılımı / P.T.O Code Description	: 62
	P.T.O Sınıflandırılması / Classification Of P.T.O	: 63 - 64
	Mercedes P.T.O	: 65 - 82
	ZF P.T.O	: 83 - 90
	Scania P.T.O	: 91 - 98
	Eaton Hema P.T.O	: 99 - 118
	Fuller P.T.O	: 119 - 128
	Isuzu P.T.O	: 129 - 146
	Mitsubishi P.T.O	: 147 - 160
	Iveco P.T.O	: 161 - 178
	Volvo P.T.O	: 179 - 190
	Turner P.T.O	: 191 - 196
	Mack P.T.O	: 197 - 200
	Liaz P.T.O	: 201 - 204
Fuller Ara Apartman / Fuller Lengthening	: 205	

### HİDROLİK VALFLER ve MONTAJ EKİPMANLARI HYDRAULIC VALVES and EQUIPMENTS

<b>S</b>	Ventiller / Valves	: 207 - 210
	Adaptörler / Adapters	: 211 - 213
	Kardan Milleri / Cardan Shafts	: 214 - 219
	Flaşlar/ Flanges	: 220
	Kaplinler- Joistik / Couplings-Joystick	: 221
	Depo Kapağı-Filtre / Tank Cover-Filter	: 221
	Düğmeler / Air Controls	: 222
	Yağ Tankları / Oil Tanks	: 223 - 224

## HAKKIMIZDA

HİPOSAN Hidrolik Pompa Sanayi, alanında uzun yıllara dayanan tecrübe ve bilgi birikimiyle 1988 yılından itibaren bünyesinde oluşturduğu profesyonel ekip ve sahip olduğu hizmet ilkeleriyle kendine özgü kalite politikasını standartlaştırmış olup, kazandığı ulusal ve uluslar arası firma kimliği ile değerli hedef kitlesi için mükemmel hizmet sunan öncü bir kuruluştur.

Hidrolik Damper Pompaları, PTO, Valfler, Ara Bağlantı Ekipmanları, Flanşlar, Adaptörler, Damper Düğmeleri, Soketler ve Kardan Milleri üretimindeki hizmet dallarına her gün yenilerini eklemenin haklı gururuyla teknoloji ve kaliteyi müşteri memnuniyeti ile birleştirmiştir.

Son teknolojsi üretimle kalitenin devamlılığını sağlamak ve müşteri memnuniyeti için AR-GE çalışmalarına sürekli devam eden Hiposan, deneyimli kadrosundan almış olduğu öz güvenle uluslar arası platformda söz sahibi konumdadır. AR-GE çalışmaları ve sektöründe ki 21 yıllık deneyimin eseri olan güven politikasıyla, imalat öncesi ve sonrasında müşteri memnuniyeti hedef alınarak çalışmalarını yürütmektedir. Üretimin her aşamasında gerçekleştirilen kalite kontrol sistemiyle Hiposan, güven kavramının önemini bilerek hareket etmektedir.

Kurulduğu ilk günden bugüne kalite ve hizmet anlayışından ödün vermeden bir çok başarıya imza atan Hiposan, değerli müşterileri için gelecekte de yeni atılımlar yapmayı ve uluslar arası başarılarla profesyonel ekip ruhuyla ulaşmayı **misyon** olarak belirlemiştir.

Ürün ve hizmet kalitesinde dünya standartlarındaki marka liderliği konumunda yer alan Hiposan, teknolojik standartları kaliteyle birleştirerek uygun performansla en iyi şekilde hizmet vermeyi **vizyon** olarak benimsemiştir.

### Kalite Politikası:

21 yıllık tecrübelerimiz ve referanslarımızla; güven, kalite, müşteri memnuniyeti anlayışını ilke edinerek her alan da **gücün yönetimi** anlayışı benimsemiş olup, uzman kadromuz, son teknoloji üretimimizle ulusal ve uluslar arası firma kimliğimizle hizmet sunmak.

## ABOUT US

HIPOSAN Hydraulic Pumps Industry, established on 1988 based on a long experience and knowledge has standardized its typical quality policy through a professional staff and service principles and is a pioneer enterprise reflecting a perfect service level with its national and international corporate identity.

HIPOSAN has affiliated the technology and quality with customer satisfaction by a right pride of adding new items every day to its production scheme, namely Hydraulic Dumper Pumps, PTO, Valves, Intermediate Coupling Elements, Flanges, Adapters, Dumper Buttons, Sockets and Drive Shafts.

Hiposan which is maintaining R&D studies for a continuous quality and customer satisfaction has a leading position on the international platform by the assurance provided by its experienced staff. Customer satisfaction before and after production is always aimed through R&D studies and the reliability resulting from 21 years of experience. Hiposan is always acting with quality controls performed on every stage of production, bearing in mind the importance of reliability concept.

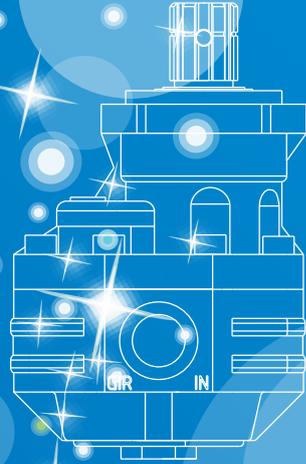

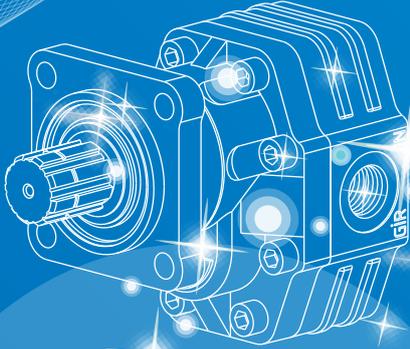

Hiposan which succeeded a lot without any compromise for the quality and service understanding from the very beginning till today has defined its **mission** as new developments in future and international successes with a team spirit together with its valuable customers.

Hiposan which reserves a trade mark leader position in world standards in terms of quality and service has defined its **vision** as the best service by affiliating quality with technological standards.

### Quality Policy:

We adopted **management of power** concept on every field with our experiences and references of 21 years and assimilated as principle the reliability, quality and customer satisfaction in every field and we aim to render service with our expert staff, last technology production and national and international corporate identity.

 Pompa Yönü  
Pump Rotation

11	UNI Sağ Dönüşlü UNI Clockwise (CW)
12	UNI Sol Dönüşlü UNI Anticlockwise (CCW)
13	UNI Çift Dönüşlü UNI Bi-Directional
23	İki Yönlü Fixed Bi-Directional
31	ISO Sağ Dönüşlü ISO Clockwise (CW)
32	ISO Sol Dönüşlü ISO Anticlockwise (CCW)
33	ISO Çift Dönüşlü ISO Bi-Directional

Hidrolik sistemlerde, sistemin bütün elemanları birbiriyle uyumlu olmalıdır (silindir, pompa, ventil, sınır kontrol ventili, yağ, yağ tankı, hortumlar, soketler vb.) Bilinçsiz kullanacağımız elemanlar pompanın ömrünü olumsuz etkiler. Kullanım amacına uygun performans (devir, basınç, debi) değerlerine sahip bir pompa modeli seçilmelidir. Dişli pompa, eksenel pompa, pistonlu pompa gibi. Uygun bağlantı tipi belirlenmelidir. (Bkz. Şekil 1)

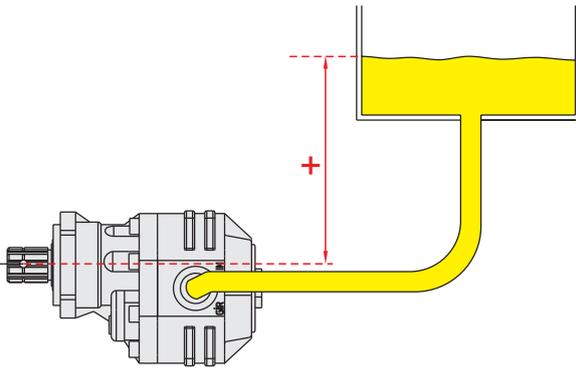

Entire elements of the system (cylinder, pump, valve, limit control valve, oil, oil tank, hoses, sockets, etc) should be compatible with each other. Elements used without sufficient knowledge negatively affect the pump's life. A pump model having compatible performance values (rotation, pressure, flow rate) with usage objectives should be selected, such as gear pump, axial pump or piston pump. Adequate connection type should be defined. (See Diagram 1)

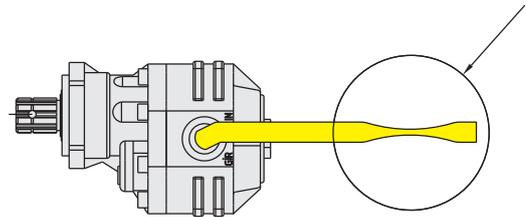

Şekil 1 Bağlantı Tipleri Diagram 1 Mounting Types

PTO elektrik motoru gibi tahrik elemanlarının yönüne uygun olarak pompa yönü belirlenir. Pompa daima tank seviyesinden altta olmalıdır. (Bkz. Şekil2)

Pump direction is defined according to drive elements such as PTO electric engine. Pump should always be under the tank level (See diagram 2)

Şekil 2 Diagram 2

Şekil 3 Diagram 3

Tüm tesisatın hortum ve rakor ölçüleri katalogumuzda belirtilen giriş çıkış rakorları ile aynı olmalıdır. Yağ giriş hortumu, pompanın emişinden etkilenmeyecek kalitede olmalıdır. Uygun olmayan giriş hortumlarında Şekil3de oluşan daralmalar pompanın ömrünü olumsuz etkiler.

Pompa giriş rakoru uygun olsa bile besleme hattındaki diğer geçiş noktalarında katalogda belirtilen çapların altında bir daralma olmamalıdır. (Bkz. Tablo1)

Hose and connector measures of the entire installation should be the same with intake and outlet connector measures indicated in the catalogue. Oil intake hose should be in a quality as not to be affected from the pump suction. Contractions on inadequate intake hoses (Diagram 3) negatively affect the pump's life.

No contractions should be seen on other feeding line passage points even if the pump intake connector is adequate (See table 1).

Akış / Flow 1/dk.	Giriş Inlet	Çıkış Outlet
8	R 1/2"	R 1/4"

50	R 1 1/4"	R 1/2"
70	R 1 1/2"	R 3/4"
90	R 1 3/4"	R 1"
125	R 2"	R 1"
150	R 2 1/4"	R 1"

Tablo 1 Table 1

Dorse damperlerde giriş ve çıkış soketleri istenilen ölçüde olmalıdır. Takılacak filtre pompa litresine uygun seçilmelidir. Yağ giriş çıkış deliklerindeki plastik koruyucular, pompa yerine takıldıktan sonra sökülmeli ve hemen rakorları bağlanmalıdır. Yağ deposu ve tesisatın temizliği kontrol edilmeli, yağ deposunun hava giriş çıkışı rahat olmalıdır. Firmamız yağ filtresini basınç hattına bağlamanızı tavsiye eder. Depo pompa için belirtilen uygun yağ (Bkz. Tablo 1) ile tamamen doldurulmalı ve birkaç saat dinlendirilmelidir.

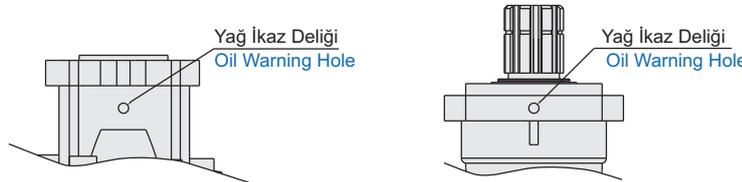

Intake and outlet sockets on Dorsey Dumpers should be on requested measures. The filter used should be selected according to filter list. Plastic guards on oil intake and outlet holes should be removed and connectors should be set in immediately. Oil tank and installation cleanliness should be controlled and the oil tank air intake-outlet should be comfortable. We suggest you to connect the oil filter to the pressure line. The tank should be completely filled with adequate oil (See Table 1) and be left to rest for a couple of hours.

PETROL OFİSİ	RANDO OIL HD 32	RANDO OIL HD 46

Tablo 2 Table 2

İlk çalıştırma yapılmadan önce tesisatın pompa girişine kadar yağla dolu olduğu ve tüm vanaların açık olduğu kontrol edilmeli, bir anlık bile olsa pompa yağsız çalıştırılmamalıdır. İlk çalıştırma basınç olmaksızın düşük devirde (kamyonlar için rölantide) birkaç dakika olmalı, pompanın normal çalışması, gürültü seviyesi, yağ kaçaqları gözlenmelidir. Anormal durumda sistemin zarar görmemesi için derhal durdurulmalı ve tekrar kontrol edilmelidir. Şekil 4de görülen tahliye deliği yağ keçelerindeki arıza ve kaçağın kolay anlaşılması için dizayn edilmiştir. Yağ tahliye deliği operatör tarafından sık sık kontrol edilmelidir.

You should control that the installation is completely filled with oil till pump intake level and that all valves are open before the cold start. Never start the pump without oil. Cold start should be for a couple of minutes under low rotation (idle running for trucks) and the pump's normal operation and noise level and oil leaks should be observed. The system should be immediately stopped in an abnormal situation to prevent any damage and should be controlled again. Discharge hole seen of Fig. 4 is designed to detect easily defects and leaks on oil seals. Oil discharge hole should be frequently controlled by the operator.

Şekil 4 Diagram 4

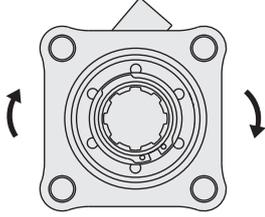

Pompa normal çalışırken katalogta belirtilen maksimum devirlerin üzerine kesinlikle çıkılmamalıdır. Pompaya sürekli basınç uygulama süreleri kesinlikle katalog değerlerinin üzerinde olmamalıdır. Tesisattaki valflerin basınç ayarları üretim esnasında hassas ölçü aletleriyle yapıldığı için kesinlikle değiştirilmemelidir. İdeal yağ sıcaklığı 50°- 60° dir. Pompa 0°-80° arasında sürekli çalıştırılabilir. Sistem normal çalışsa bile tesisatın periyodik bakımları (yağ kalitesi, filtre temizliği, basınç ayarları, görsel kontroller vb.) ihmal edilmemelidir. Olası problemlerde servisimizle irtibat kurunuz.

Maximum speed indicated on the catalogue should never be exceeded when the pump operates normally. Periods of continuous pressure application on the pump should never exceed catalogue values. Pressure adjustments of valves on the installation should never be changed for they are set up by sensitive measurement devices during the production. Ideal oil temperature is 50°- 60°. The pump can be continually operated between 0° and 80°. The installation's periodical maintenance (oil quality, filter cleaning, pressure adjustments, visual controls, etc) should never be neglected even if the system operates normally. Please contact our service department in any problem.

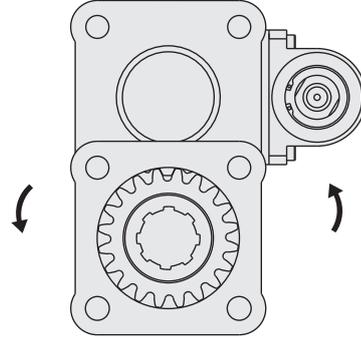

## 30 SERİSİ DİŞİLİ POMPA

3

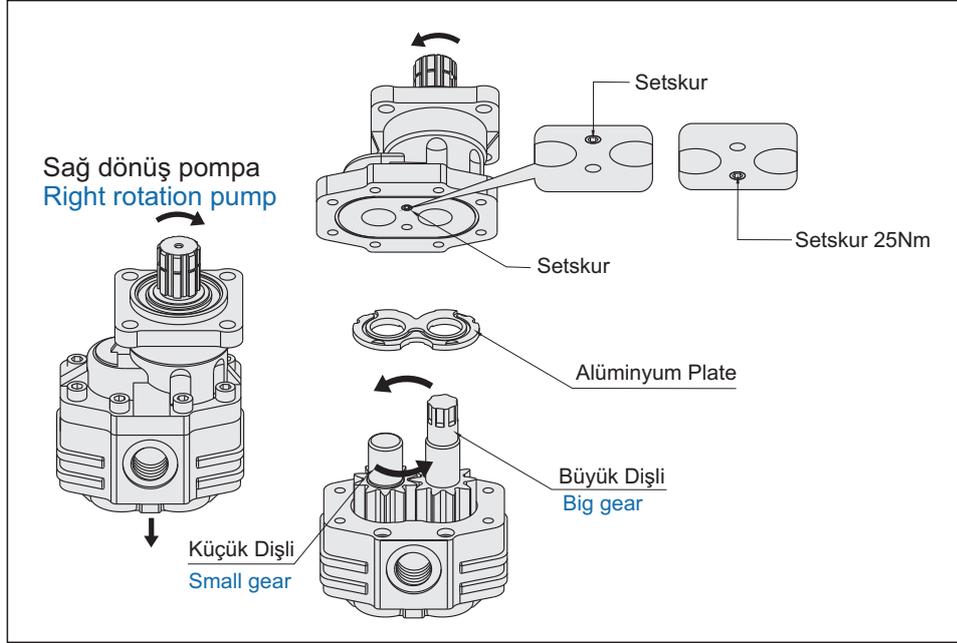

4

Arka kapak vidaları sökülür. Kapağı gövdeden ayırmadan kapağın yanındaki yarım olan ok işaretini gövdedeki diğer yarım ok işaretini tamamlayacak şekilde (bkz. 2) kapak 180° çevrilir. Tekrar kapak vidalarını sıkı hale getirilir.(bkz. 4)

Please remove the back screws. Without moving the distributor body from pump, rotate the distributor body 180°. Do not move the distributor body during the operation(see d.2).And tighten the screws.(see d.4)

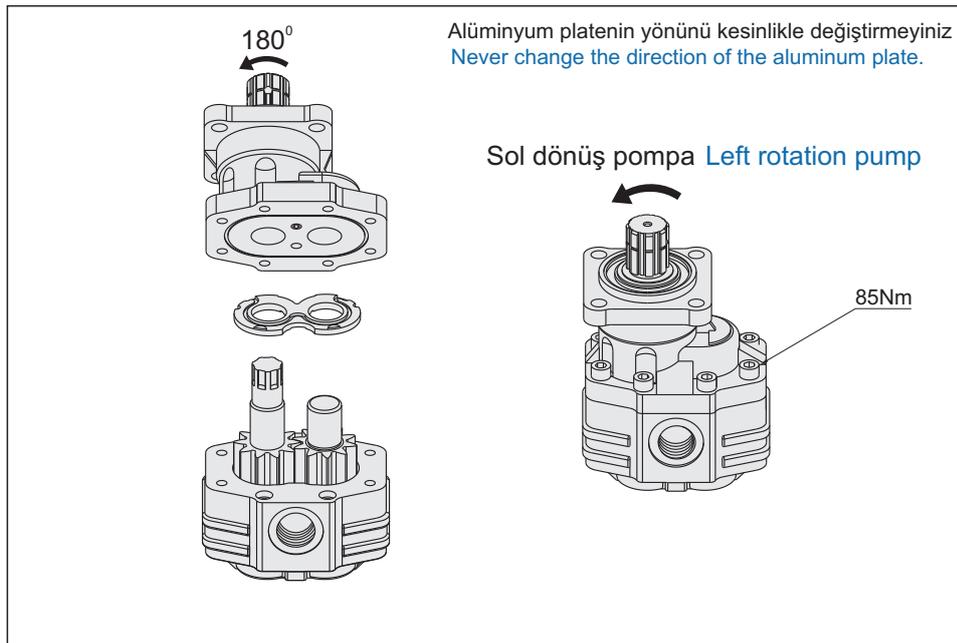

Pompamızın dönüş yönünü değiştirmek için önce kapağı gövdeden ayırırız (Şekil1)  
Separate first the cover from the body to reverse the pump (Diagram 1)

(Şekil1) (Diagram 1)

Kapakta gördüğümüz setskur vidayı yerinden çıkarıp karşısındaki boş deliğe takarız. Alüminyum playti çıkarırız. Küçük dişli ve büyük dişliyi yer değiştiririz. Alüminyum playti söktüğümüz gibi tekrar takarız ve gövdedeki işlemi tamamlayıp kapağı 180° çevirerek pompanızı tekrar monte ederiz.

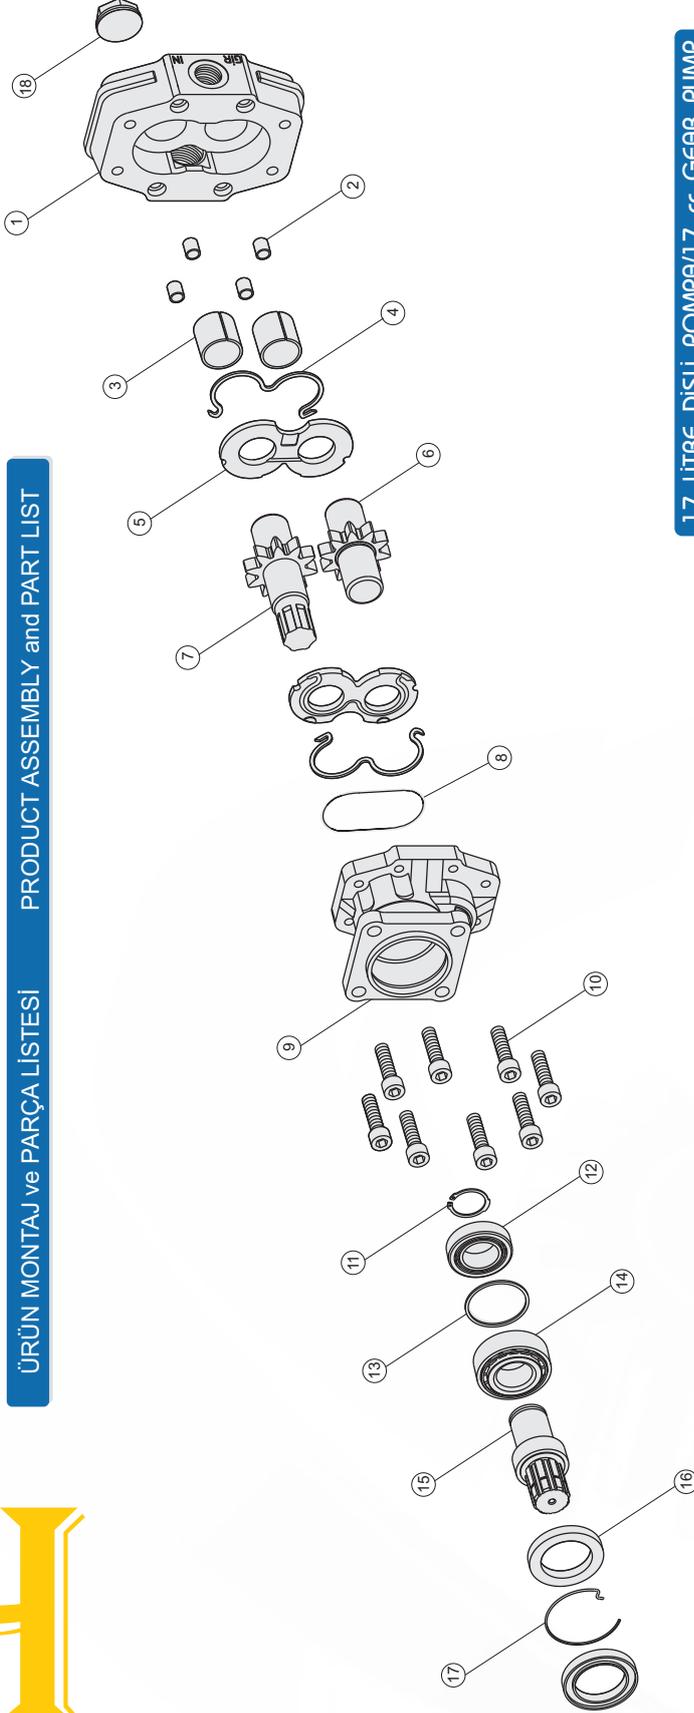

Remove the endless screw you see on the cover and put it on the opposite empty hole. Remove the aluminum plate. Change locations of the small and big gears. Set in place the aluminum plate you have already removed. The body operation is finished. Turn 180° the cover and re-assemble the pump.

Not: Pompayı tekrar monte ederken kapak yüzeyindeki o-ringin montaj esnasında düşmemesi için yuvaya oturtulup greslenmesi gerekir.  
Note: O-ring on the cover surface has to be put again on the housing and greased in order to prevent it from falling down during the pump re-assembly.

## P.T.O. / POWER TAKE OFF

### PTO'LARIN SINIFLANDIRILMASI

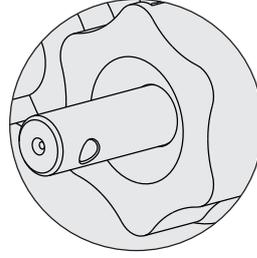

- 1-) PTO'lar ana şanzımana sağ yandan, sol yandan veya kuyruktan bağlanabilirler.
- 2-) Kuyruktan bağlanan PTO'lar düz tip (tek dişli) ve aktarmalı tip (çift dişli) olarak ikiye ayrılır.
- 3-) PTO'lar çalışma sistemine göre havalı, mekanik veya vakumlu olarak üç gruba ayrılır.
- 4-) PTO çıkışları Iso, Uni, pim delikli ve flanşlı olmak üzere dört farklı çıkışa sahiptir.

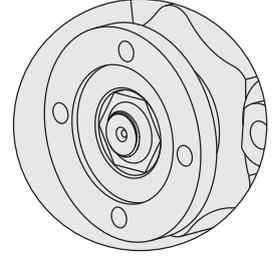

Iso

Uni

Pim Delikli

Flanşlı

### PTO SEÇİMİNDE DİKKAT EDİLECEK HUSUSLAR

- 1-) Aracın modelini ve ana şanzıman model nosunu ana şanzıman üzerindeki etiketten tam olarak belirleyin. Katalogdan ilgili PTO grubunu ve çeşitlerini inceleyin.
- 2-) Şanzıman bağlantı yerini belirleyin (kuyruk, sağ, sol)
- 3-) Ana şanzımana uygun PTO'yu seçin.
- 4-) PTO'nun ürettiği gücün ve devrin sizin gereksiniminizi karşılayıp karşılamadığını belirleyin.
- 5-) PTO ile birlikte ihtiyacınız olabilecek ek ürünleri (kardan mili, flanş, kaplin vb.) belirleyin.
- 6-) PTO'nun kumanda tipini belirleyiniz (havalı, mekanik, vakumlu)

### MONTAJ YAPILIRKEN DİKKAT EDİLMESİ GEREKEN HUSUSLAR

- 1-) Montaj sırasında aracın motorunu kapatın.
- 2-) Ana şanzıman yağını kapalı bir kutuya boşaltın.
- 3-) Ana şanzıman dişlisini koruyan kapağı açın. Bağlantı yüzeyini ve civata deliklerini temizleyin.
- 4-) PTO bağlantı saplamalarını ana şanzımana gevşemeyecek şekilde sıkın.
- 5-) PTO contasını montaj esnasında sabit durması için gres ile yağlayın. Kullanılan yağ kalıcı olmalıdır.
- 6-) 6 delikli PTO'larda civatalar 60Nm, 8 delikli PTO'larda 70Nm, kuyruktan 4 delikli PTO'larda 70Nm olmalıdır.
- 7-) PTO'yu ana şanzımana monte ettikten sonra motoru 5-10 sn kadar çalıştırın ve PTO'dan gelen sesi dinleyin. Ses inilti ise dişler birbirinin üzerine fazla basmış olabilir. PTO'yu alıp bir conta daha veya biraz daha kalın bir conta takın. Eğer PTO'dan gelen ses takırtılı ise daha ince bir conta takın. Hiçbir zaman PTO ile şanzıman yüzeyini birbirine temas ettirmeyelim.
- 8-) Boşaltılan ana şanzıman yağını doldurun, eksik ise tamamlayın. Kontrol etmeden kesinlikle aracı hareket ettirmeyin.
- 9-) Motoru 5-10 dakika kadar çalıştırın. Bu süre zarfında herhangi bir problemle karşılaşmadığınız takdirde montaj başarılı olmuştur.
- 10-) Civataların sıkılığını tekrar kontrol edin, gözle son kontrolü yapın.
- 11-) Kompresörden gelen hortumu PTO'ya takın. Minimum 6 bar.
- 12-) PTO'nun devreye geçip geçmediğini kontrol edin.

### PTO PROBLEMLERİ

#### a-) PTO Devreye Geçmemesi

- 1-) Bu sorunun en önemli nedeni hava basıncının yeterince yüksek olmayışı yada hava basınç hortumunda bir kaçak olmasıdır. PTO'lar 6 bar basınç ve üzerinde çalışır.
- 2-) PTO'ya tozlu veya sulu hava gelmektedir. Hava akışları temizlenmeli, gerekirse yenilenmelidir.
- 3-) Pnömatik piston belli bir süre çalışmadığı zaman sıkışma yapabilir ve hava basıncı yüksek olsa bile PTO çalışmaz.
- 4-) Damper düğmesi bozulmuş olabilir.

#### b-) PTO'nun Devreden Çıkması

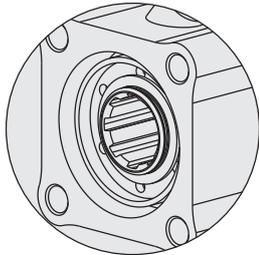

- 1-) Pnömatik piston bozulmuştur. Genelde pistonun içine tozlu ve sulu hava gelmesinden kaynaklanır.
- 2-) Damper düğmesi bozulmuştur. Tahliye yapmaz, pistonu bırakmaz.
- 3-) Debriyajsız kullanımlarda dişli uçları şişme yapıp kavrama dişlisini bırakmayabilir.

#### c-) Diğer Problemler

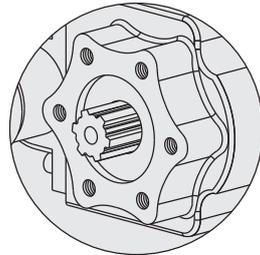

- 1-) PTO üzerindeki sızdırmazlık ve contaların doğru monte edilmemesi durumunda PTO'nun ürettiği tork düşer.
- 2-) Kavrama dişlisi ile ana şanzıman dişlisinin birbirine sıkı monte edilmesi sonucu PTO'dan yüksek ses çıkar. Sorun giderilmediği takdirde zamanla rulmanlar ve dişliler zarar görebilir.
- 3-) Araç PTO devreden çıkarılmadan hareket ettirilirse PTO'ya ve ana şanzımana ciddi zararlar verebilir.

**CLASSIFICATION OF PTOS**

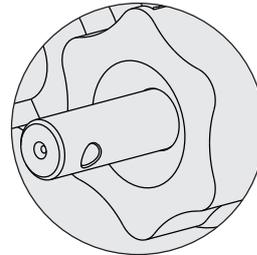

- 1) PTOs can be mounted to the gear box from the right or left side or from the rear.
- 2) PTOs mounted from the rear are divided into two, namely flat type (single gear) and mounting type (double gear).
- 3) PTOs are divided into three groups according to operation system, namely pneumatic, mechanic or vacuum.
- 4) PTOs have four different types of outlets such as Iso, Uni, pin holed and flanged.

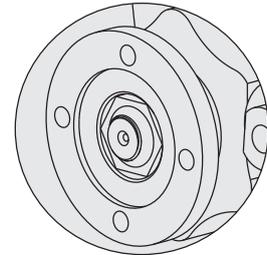

Iso

Uni

Pin Hole

With Flange

**POINTS TO TAKE INTO CONSIDERATION ON PTO SELECTION**

- 1) Define exactly the vehicle and the gear box models numbers from the label on the gear box. Examine relevant PTO group and types from the catalogue.
- 2) Determine the gear box mounting location (rear, right, left).
- 3) Select the PTO compatible with the gear box.
- 4) Determine whether the power and rotation provided by the PTO meet your requirement or not.
- 5) Determine additional products (drive shaft, flange, coupling, etc) you may need together with the PTO.
- 6) Determine the PTO command type (pneumatic, mechanic, vacuum).

**POINTS TO BE TAKEN INTO CONSIDERATION DURING THE ASSEMBLY**

- 1) Stop the vehicle engine during the assembly.
- 2) Discharge the gear box oil into a can.
- 3) Open the cover protecting the main transmission gear. Clean the mounting surface and bolt holes.
- 4) Tighten well PTO mounting drift pins to the gear box.
- 5) Grease PTO seal to make it stable during the assembly. Grease used should be permanent.
- 6) Bolts should be 60Nm on 6 holes PTO, 70 Nm on 8 holes PTO and 70Nm on rear mounting 4 holes PTO.
- 7) Start the engine for 5-10 seconds after having assembled the PTO on the gear box and listen to the noise of PTO. Gears may be pressed more than necessary on each other if the noise is moaning. Remove PTO and put another seal in addition or a thicker seal. Put a thinner seal if the noise is clattering. Never contact the PTO with gear box surface.
- 8) Fill in the discharged gear box oil and add if necessary. Never move the vehicle without having controlled.
- 9) Start the engine for 5 to 10 minutes. The assembly is successful if no problems occur within this period.
- 10) Control again the tightness of bolts and make a last visual control.
- 11) Mount the hose coming from the compressor to the PTO. Minimum 6 bar
- 12) Control whether PTO works or not.

**PTO PROBLEMS**

a-) Not Working Pto

- 1) The most important reason for this problem may be a not sufficiently high pressure or a leak on air pressure hose. PTOs operate under 6 bar pressure or over.
- 2) Dusty or wet air is coming to PTO. Air should be cleaned in the night and renewed if necessary.
- 3) Pneumatic piston may get jammed if it is not operational for a given time and doesn't operate even on high air pressure.
- 4) Dumper button may be deteriorated.

b) Not be able to stop pto white working

- 1) Pneumatic piston may be deteriorated. This is generally due to coming of dusty and wet air to the piston.
- 2) Dumper button may be deteriorated. It does not discharge and let the piston free.
- 3) Gear ends may get swelled and do not let the couplar gear free on uses without clutch.

c) Other problems

- 1) Torque provided by PTO decreases if the impermeability is not fit and seals are not assembled in the right way.
- 2) A loud noise emerges from the PTO if couplar gear and transmission gear are not tightly assembled. Ball bearings and gears may be damaged if the problem is not solved.
- 3) PTO and the gear box may be severely damaged if the vehicle starts to work without PTO getting disengaged.
